Focus: practical computer vision and local AI demos

Learning Journey

From pixels to applied computer vision systems.

- Image representation and processing
- Classical machine learning features
- CNNs and transfer learning
- Object detection, tracking, and VLM concepts

Featured Projects

Selected work from the Computer Vision course.

- Plant Disease Detection Proposal
- Object Tracking and Zone Analytics
- Visual Language Models with CLIP concepts
- CNN Chihuahua vs Muffin Classifier

Technical Skills

Tools and ideas practiced across the course.

- Python, Jupyter, Google Colab
- OpenCV, Pillow, NumPy, Matplotlib
- PyTorch, TensorFlow, torchvision
- GitHub documentation and project organization

Next Steps

Portfolio direction after this course.

- Polish final plant disease demo video
- Add screenshots and results to GitHub
- Continue building local AI computer vision projects
- Use portfolio for internships, jobs, and future coursework
